Electric internal vibrator

Pneumatic external vibrator

Frequency converter

NetterVibration

Vibrators for the Construction Industry

Excavator equipped with hydraulic internal vibrators from the NHR series, for compacting bulk concrete

Silent compaction of prefabricated parts using a vibrating table from the **GyroShake**® series

Compaction of concrete on a steel formwork using external vibrators from the NEG series

Tunnel formwork with pneumatic external vibrators from the NVT series

Electric external vibrators from the NEG series on a pipe form

Compacting concrete in a building, using electric internal vibrators from the NCZ series

Applications

NetterVibration supplies electric, pneumatic and and hydraulic internal and external vibrators for commercial compaction of concrete.

Our vibrators perform convincingly, both on building sites and in the production of prefabricated parts, due to the efficiency of compaction and the high surface quality of the concrete.

Small vibrating tables are used for testing concrete, larger vibrating tables (**GyroShake**® series) for the production of prefabricated parts.

NetterVibration has a worldwide network of experienced application engineers and field representatives, who will willingly assist clients with the application of vibration technology to solve problems on site.

We will be pleased to demonstrate our consulting competence in connection with a free trial of our test units.

NetterVibration also supplies accessories, mountings and frequency converters to suit your specific application.

Netter provides solutions.
Consult our experienced application technicians.

Unit description

Applications

Pneumatic External Vibrators Series NVT/NVR/NVG

14

- High frequency
- No wearout
- No bearings
- Quick displacement with quick release brackets
- Centrifugal force 7.130 N to 62.260 N

- Concrete compaction in concrete forms, tunnel construction
- Cleaning
- Loosening
- Emptying

Multiple-Shaft Vibration Systems Series VectorDrive

37

- Resonance-free start and stop
- Amplitude adjustment during operation
- Frequency control during operation
- 100% controlled vibration in each direction

- Compacting
- Conveying
- Mixing
- Distributing

Shaker Station for Concrete Compaction Series GyroShake

42

- Noise level below 70 dB(A)
- Vibrating table with min. 4 unbalance motors
- Frequency- and amplitude regulation during operation

- Concrete compaction in the precast part manufacturing

Hydraulic External Vibrators Series NHG L, Series CC, CV, CCV and DV

32

30

- Driven by the hydraulic motor
- Centrifugal force 1.750 N to 19.600 N

- Emptying of containers
- Operation at mobile machines

Hydraulic Internal Vibrators Series NVI

29

- Mounting at hydraulic loaders or excavators
- Automatic control
- Hydraulic supply with existing operation equipment of the carrier vehicle
- Variable mounting

- Mass Concrete Compaction

Vacuum Fixing Devices Series VAC

15

- Simple operation
- Quick attachment
- Integrated vacuum production

- Use of vibrators without solid mounting
- Application as vibration-tools for maintenance

Pneumatic Turbine Vibrators Series NCT

23

- Direct rotary vibration
- Very high rotary speed
- Centrifugal force 294 N to 8.537 N

- Loosening
- Conveying of bulk material
- Prevention of product locking

Pneumatic Linear Vibrators Series NTS

25

- Direct linear vibration
- Frequency and amplitude can be adjusted separately
- Synchronous operation from NTS 350 possible

- Drive of conveyors
- Loosening
- Compacting at concrete block making machines

Netter projecting of vibrating systems and energy requirements planning

We project complete studies of vibrator equipments for tunnel moulds, vibrating tables, batteries and in general for all concrete compaction duties. Our goal is to make you participate in our 50 years experiences in the field of vibrating. Our team of technicians is at your service to solve all kinds of vibrating problems.

1

Netter Electric Internal Vibrators Series NCZ and NCZ/S

- Higher centrifugal forces than conventional vibrators
- Special suspension of the eccentric weight
- Head tungsten carbide coating
- Maximum lifetime due to thermosensores
- Interchangeable elements
- Nominal frequency 12.000 min⁻¹
- Centrifugal force from 1.160 N to 10.470 N
- Compacting efficiency 16 m³/h to 65 m³/h
- 42 V to 48 V, 200 Hz or 250 V, 200 Hz

The Netter modular design:

8 interchangeable elements can be assembled without special tools on the construction site:

- 1 - stator with thermosensors (one per phase)
- 2 - body
- 3 - steel or rubber nose pieces
- 4 - ball or roller bearing
- 5 - spacer
- 6 - ball or roller bearing
- 7 - rotor
- 8 - eccentric weight made of bronze

Applications

The high power series NCZ and NCZ/S electric internal vibrators are particularly suitable for achieving high compaction performance with optimum extraction of air porosity, due to their enormous centrifugal forces.

NCZ vibrators thus fulfil the requirements of modern concrete technology.

The modular construction makes these internal vibrators very easy to service.

The special unbalance suspension and the long operating life of the bearings guarantee long-term reliability.

The coil is 100% protected from burning out by means of thermal sensors. In the event of overheating, the unit switches off automatically.

Series NCZ/S electric internal vibrators have a hand switch shaped like a pistol grip. The shorter connection hose is adapted to suit the special applications of concrete plants.

NCZ electric vibrators can be operated using all converters from 42 V to 48 V, 200 Hz .

NetterVibration supplies frequency and voltage converters suitable for all electric vibrators.

Permissible operating conditions

Voltage:
42 to 48 V, 200 Hz or 250 V, 200 Hz

Ambient temperature:
0°C to 40°C

Netter Electric Internal Vibrators Series NCX and NCX/S

- Highest compacting rate in this price range
- Protection against burn-outs by thermal sensors
- Interchangeable elements, very easy to dismount
- Steel or vulcollan nosepiece
- Nominal frequency 12.000 min⁻¹
- Centrifugal force from 1.160 N to 6.000 N
- Compacting efficiency from 11 m³/h to 60m³/h
- 42 V to 48 V, 200 Hz

Design and functioning principle

The electric internal vibrators series NCX are particularly suitable for achieving high compaction performance with optimum extraction of air porosity, due to their enormous centrifugal forces. NCX vibrators thus fulfil the requirements of modern concrete technology. The modular construction makes these internal vibrators very easy to maintain.

The special unbalance suspension and the long operating life of the bearings guarantee long-term reliability.

The coil is 100% protected from burning out by means of thermal sensors. In the event of overheating, the unit switches off automatically.

Series NCX/S electric internal vibrators have a hand switch shaped like a pistol grip. The shorter connection hose is adapted to suit the special applications of concrete plants.

NCX electric vibrators can be operated using all converters from 42 V to 48 V, 200 Hz.

NetterVibration supplies frequency and voltage converters suitable for all electric vibrators.

Netter Electric Internal Vibrators for slip form pavers Series NCX M

- Highest compaction rate
- Interchangeable elements, very service friendly
- Straight, elbow shaped and horizontal T-version available
- T- vibrator with 2 different unbalances (CC version)
- 110 Volt, 200 Hz
- Optional thermal trips available

NCX M straight

NCX M elbow shaped

NCX M horizontal

5

Netter Electric Internal Vibrators Series NCE and NXE

- Direct connection to 230 V
- Light weight, easy handling
- Maximum lifetime due to thermal sensor
- Nominal frequency 12.000 min⁻¹
- Centrifugal force from 1.600 N to 6.000 N
- Voltage 230 V, 50–60 Hz, 1 phase

NCE/NXE

NXE B

Design and functioning principle

Series NCE and NXE electric internal vibrators have an equivalent performance to those in the NCZ and NCX series. They differ in just one aspect. The NCE and NXE series have an electronic micro-converter with a hand switch integrated in the power cable, so that the internal vibrators can be connected directly to 230 V power sockets. In the NXE B version, the micro-converter is mounted separately, after the hand switch.

Permissible operating conditions

Voltage:
230 V to 240 V, 50 Hz to 60 Hz, 1 phase

Standard version: 110 V, protective hose 1,5 m, cable 6 m, CEE connector. Other voltages, hose and cable lengths on request.

NCX M straight

NCX M elbow shaped

NCX M T horizontal

Applications:

Series NCX M electric internal vibrators are mainly used in concrete slip form pavers. Compared to conventional vibrators the enormously increased centrifugal force permits a higher compaction rate. The resulting optimum removal of entrapped air fulfills the requirements of modern concrete technology.

Design and Function:

The modular design makes these vibrators very easy to service. For mounting standard tools can be used.

The vibrators can be fitted optionally with thermal trips. These will prevent breakdowns from overheating.

The special feature of the NCX M T CC is that it can be operated in both rotational directions using an appropriate control. When the NCX M T CC rotates in one direction, it works with a centrifugal force of 7.2 kN. Upon change of the rotational direction the unbalances shift relative to each other, so that the vibrator works with a centrifugal force of only 5.6 kN.

Nominal voltage / Nominal frequency:

110 V, 200 Hz

NetterVibration supplies the suitable accessories for mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Netter Pneumatic Internal Vibrators Series NVL

- High centrifugal forces
- Adjustable speed
- Low weight
- High operating reliability due to simple and rigid construction
- No bearings, therefore scarcely any wear

The Netter pneumatic internal vibrators series NVL have a high performance level and an extremely rigid construction. They have only two mobile parts, rotor and lamella.

Type NVL		25	35	45	55	75	86	115S*	140S*

31

Netter Electronic Frequency Converters Series NFC

- Strong output power
- Considerably lower weight compared to rotating converters
- Considerably lower noise level compared to rotating converters
- Up to 3 connections possible
- Suitable for harsh construction site operation
- Switch off at overload and immediate restart
- Phase control - protection of high frequency internal vibrators
- High safety due to galvanic separated output
- Short time overload capacity up to 150 %
- Suitable for operating with Netter electric internal vibrators series NCX and NCZ

Dimensions:

Applications

Frequency converters series NFC are suitable for the power supply of Netter internal vibrators series NCZ, NCZ/S, NCX and NCX/S. It is possible to connect units of other well-known manufacturer.

Technical characteristics

NFC are equipped with the maximum possible quantity of CEE (42 V/32 A) sockets. The voltage is electronically adjusted to the connected vibrators. The steel plate body is pulverized and fixed in a portable protection frame.

Protection

The converters are self-protected against overload, overheating, short-circuit and ground fault in the motor lines.

Permissible operating conditions

Connecting values:

NFC 2,0/1 and NFC 3,0/2: primary 230 V, 50/60 Hz, secondary 42 V, 200 Hz.
NFC 5,5/3: primary 400 V, 50/60 Hz, secondary 42 V, 200 Hz.

Ambient temperature:

0°C to 40°C

Power supply cable:

Length 2 m

Protection:

IP 44

NetterVibration offers suitable frequency converters for all electric internal vibrators.

Netter provides solutions.

Consult our experienced application technicians.

* Designed for simultaneous operation of the indicated number of vibrators.

Applications

Netter series FSW frequency and voltage converters convert the local main voltage into protection voltage.

They are particularly suitable for the operation of Netter internal vibrators series NCZ, NCZ/S, NCX and NCX/S as well as external vibrators series NEG/NEH.

The frequency and voltage converters are available with 42 V or 250 V secondary voltage. FSW converters are equipped with the maximum possible number of CEE (32 A) power sockets.

The required power performance is determined by the internal vibrators to be connected.

A thermal motor protection switch shuts the unit off when current consumption levels are too high.

Safety

Personal safety is assured by means of galvanic isolation.

Permissible operating conditions

Connecting values:
FSW 2 to FSW 45: primary 400 V, 50 Hz, secondary 42 V, 200 Hz

Ambient temperature:

0°C to 40°C.

Netter provides solutions.

Consult our experienced application technicians.

*laid-out for simultaneous operation of indicated quantity of vibrators.

Suitable for:

Netter electric internal vibrators

Netter electric external vibrators

Applications:

Netter diesel generators series NFG are used to operate Netter electric internal and external vibrators on sites with no electric supply network.

The converter is coupled directly on the Hatz diesel generator. Secondary current voltage optionally in 42 V or 250 V available.

Netter frequency and voltage converters series FSW (leaflet 33) are to be used on sites where electric supply network is available.

Both series are suitable for the operation of Netter electric internal vibrators series NCZ, NCZ/S, NCX and NCX/S or electric external vibrators of the series NEG/NEG.

Permissible operating conditions

Connecting values:

Secondary 42 V, 200 Hz or 250 V, 200 Hz

Ambient temperature:

0°C to 40°C.

Netter provides solutions.

Consult our experienced application technicians.

Netter Electric External Vibrators Series NEG

Special Version with Reduced Duty Time

Applications

Series NEG electric external vibrators are designed for continuous operation with 100% duty time. In addition, special versions with reduced duty times are available. The reduced duty time allows the use of smaller units possible with the same power output.

Design and functioning principle

Special vibrators with larger unbalances can be used for intermittent or short-time operation. Despite smaller unit size they deliver the same centrifugal forces as the next housing size up.

NEG with reduced duty times are built according to the customer's requirements, to enable individual solutions.

Special Version with CC Unbalances

Applications

The special version with CC unbalances are used when two different unbalance settings need to be available during operation.

Design and functioning principle

In order to use the CC unbalances, a suitable electric switching circuit is required so that the NEG can be operated in both directions. When the NEG rotates in one direction it operates with e.g. maximum unbalance (top picture).

When the direction of rotation changes, the outer unbalance disc automatically turns through a specified angle against the inner unbalance disc, creating a reduced unbalance setting (picture below).

The CC unbalances are built according to the customer's requirements and allow a second unbalance setting of 25-100% of the main value.

Special Version NEG S in Stainless Steel

Applications

Series NEG S electric external vibrators can be used wherever the surfaces are subject to particular requirements for chemical resistance. An important feature of the NEG S series is its modular construction. This enables economical production of even the smallest of series in various steel materials. The protection class IP 66 (protection from dust entry and water flooding) allows cleaning with power jets and aggressive cleaning agents.

Design and functioning principle

All internal components of the stainless steel vibrators come from the established NEG series and are thus production proved.

Even the standard version of the NEG S has a surface quality of 6,3 µm and therefore satisfies the requirements for the chemical and pharmaceutical industries. A higher surface quality can easily be provided if required, e.g. for the food industry. Stainless steel housings are generally heavier than the standard housings. The greater mass must therefore be considered in the layout stage.

Static Adjustable Frequency Converter Series NFI/NFU Static Adjustable Frequency Control Series SRF

Applications

The frequency control of the series SRF and the frequency converters of the series NFI and NFU are used for speed regulation of electric vibrators.

Special applications require frequencies which cannot be achieved with normal multipole vibrators at line frequency. These frequency converters are characterized by their robust and straight-forward design.

Design and Functioning Principle

Low-loss power electronics permit the operation at input voltages with high tolerances. The frequency converters generate three-phase voltages with variable frequencies of 0 Hz to 500 Hz, thus making it possible to easily adjust the speed. The permissible temperature range is 0°C to +40°C.

All required parameters such as starting and stopping time, run-up ramp, maximum motor and pulse frequency, slip compensation and U/F characteristic are predefined by **NetterVibration**.

Optionally a brake resistor can be used for time-critical applications or large vibrators which permits a rapid braking / deceleration within a few revolutions after switching off the supply voltage in order to avoid unwanted resonance vibrations.

SRF frequency controls are mounted in a switch cabinet with protection type IP 54.

NFI frequency converters are mounted in an IP 2x housing for installation in a customer existing switch cabinet. The performance data correspond to those of the series SRF.

NFU frequency converters with motor output in the IP 54 housing for wall-mounting are equipped with an on-off switch, direction switch and set point potentiometer.

Type*	Supply Voltage	Max. Motor		Dimensions (W× H× D) [mm]

Netter Braking Devices Series BZ

Type	Supply Voltage	Max. Nominal Power [kW]	Dimensions (W x H x D) [mm]
BZ 30	1 ~ 230 V /	5 / 5,5	55 × 68 × 110
BZ 70	3 – 400 V	10 / 11	158 × 185 × 110
BZ 200	50/60 Hz	26 / 28	145 × 270 × 180

The max. nominal power serves only as a guide for selection. Please consult us, we will help you with your layout!

Applications

Series BZ braking devices are used to bring the running NEG to a standstill as quickly as possible.

It is often necessary to be able to switch off vibrating tables and conveyors without them running on, in order to avoid the symptoms of resonance.

A special feature of these devices is a very high braking efficiency with compact unit size.

Design and functioning principle

Upon activation of the brake the load-resistant power electronics changes the direction of the electric rotational field, thus bringing the NEG to an immediate standstill. The momentarily high braking currents are easily tolerated by the NEG. The permissible temperature range lies between 0°C and +40°C.

These braking devices are only suitable for constant mains frequencies of 50 Hz or 60 Hz. Operation together with a frequency converter is not permitted.

Netter Electric External Vibrators Series NEG

Formulas

Unbalance	$M = s \times m$	Centrifugal force	$F = a_{(g)} \times m \times 9,81$
Acceleration	$a_{(g)} = s \times \left(\frac{n}{1000}\right)^2 \times 5,59$	Centrifugal force	$F = M \times \left(\frac{n}{1000}\right)^2 \times 54,84$

Symbols and Units

Conveying

Sieving

Compacting

Applications

Series NEG, NEA or NED electric external vibrators are used whenever, for example, conveyor chutes or sieves need to be driven. In addition, these devices can loosen material blockages and adhesions in silos. When used on concrete forms, the especially even vibration produces high surface quality and compaction of the concrete.

The special feature of the NEG is its maintenance-free operation, even in rough environmental conditions.

Design and functioning principle

Electric external vibrators are unbalance motors, which work according to the short circuit runner principle and, apart from a few significant differences, are very similar to conventional electric motors.

The 3-phase NEG units run at 750, 1000 or 3000 min⁻¹ with a 230/400V, 50 Hz power supply, depending on the number of poles.

The NEA single phase units run at 3000 min⁻¹ with a 230V, 50 Hz power supply. Additional voltages are available.

The direct current NED units run at 3000 min⁻¹ with a 12 or 24 Volt power supply.

Unbalances sitting on each end of the shaft produce an unidirectional sinus-shaped rotation at the frequency of the respective speed of rotation.

All NEG/NEA are also designed for operation at 60 Hz. The speed of rotation then lies at 20% above the values at 50 Hz. The unbalance is adjusted if necessary.

Generously dimensioned rolling bearings guarantee high operational safety. All NEG are suitable for operation with Netter frequency converters, without limitation.

Compacting of moulding sand

Tunnel moulds

Dimensions of NVH 1 and NVH 4

Application

The pneumatic external vibrators series NQT, NVG, NVR und NVT are especially suitable for compacting, conveying and loosening bulk material.

They are used to compact concrete, empty bins and as drives for conveyors, sieves and vibrating tables.

A special feature is the ruggedness against strong varying loads. There is no danger of overload.

Design and functioning principle

The vibration (circular) is produced by eccentric rotating rotors. The frequency and herewith the centrifugal force are continuously adjustable by the operating pressure. For operation a control valve is required (not included in scope of delivery).

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (Filter ≤ 40 µm), preferably with oil mist.

Operating pressure:

1 bar to 7 bar

Ambient temperature:

-10°C to +60°C

Units for other temperatures are available.

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consult our experienced application technicians.

Netter Multiple-Shaft Vibration Systems Series *VectorDrive*

- 100% controlled vibration in each direction
- Resonance-free start and stop
- Amplitude adjustment during operation
- Frequency control during operation
- Constant acceleration with varying loads
- Prevention of resonance and associated noise
- Operating times of less than 1 second possible
- Control loops for acceleration possible

Netter Multiple-Shaft Vibration Systems Series *VectorDrive*

Horizontal arrangement of vibrators

E.g. for mixing, feeding, compacting and rocking

Vertical arrangement of vibrators

E.g. for mixing, tumbling, compacting and sieving

Linear arrangement of vibrators

(compact mounting)

E.g. for feeding, compacting and rocking

VectorDrive

Visual aging of paving stones

Applications:

The multiple-shaft vibration system **VectorDrive** offers a multitude of application possibilities.

The resonance-free starting and stopping, together with independent regulation of the working direction, frequency and amplitude open up new possibilities for compacting, mixing, feeding and distributing.

Design and Function:

The **VectorDrive** system consists of a control unit and at least 4 vibrators.

For an electric vibrator there are generally two operating conditions and two transitional phases: standstill (no vibration), nominal rotational speed (vibration) and deceleration up to nominal rotational speed or deceleration down to standstill. Often, however, only the two operating conditions, standstill and nominal rotational speed, are desired, since detrimental resonance zones must be passed through in the transitional phases.

Example: Bulk material is optimally compacted using external vibrators at 3000 revs/min. When passing through rotational speeds between 1700 revs/min and 1300 revs/min, undesirable loosening can occur. The best solution would be to simply switch on the vibration at the nominal rotational speed and then switch it off again.

The control unit of the **VectorDrive** system makes this desired "on/off" effect (vibration / no vibration) possible.

Within a fraction of a second, the unbalances are positioned with each other in a way that allows the required centrifugal force and working direction.

Independent of the arrangement of the vibrators on the table, it is possible to create circular vibrations, as well as linear vibrations, by a change of the working direction. The various working directions can be controlled successively during operation, also with changing frequencies and amplitudes.

The **PowerCube** is the preferred variant for the arrangement of the vibrators. The vibrators, in this case, are arranged in a cube under the table. The vibrators can be easily rearranged by dismounting and rotating the cube. Of course, it can just as easily be mounted under a different table construction.

Netter Shaker Station for Concrete Compaction Series *GyroShake*

- System for silent compaction, noise level below 70 dB(A)
- Nearly pore-free exposed concrete
- Regulation of amplitude during operation
- Regulation of frequency during operation
- Can be integrated in pallet circulation systems
- Shaker station size as per customer's requirement

NetterVibration

Netter Shaker Station Series *GyroShake*

Technical data and dimensions as per customer's requirements.

Applications

Shaker stations in the *GyroShake* series are used for the compaction of concrete in pre-cast part manufacturing plants. The concrete for e.g. panel ceilings, garage floors, double-wall panels or railway sleepers is silently compacted in moulds, with operational noise emission levels of below 70 dB(A).

The system impresses with its high compaction performance, practically pore-free exposed concrete and short cycle times at < 70 dB(A). It can be integrated in pallet circulation systems and controlled by their master computer. The stations are individually assembled to meet the customer's needs.

Design and Working Principle

The station consists of a control and a base frame on which a free-swinging frame is fixed by using a patented suspension system. This guarantees a loss-free, defined deflection of the frame. At least 4 electric unbalance motors are placed on the frame.

The selection of the parameters for the X-, Y- (longitudinal and lateral directions) and an additional circular motion (Z-motion) is made via the electronic control. The unbalance motors can be regulated within a frequency range of 0 –7 Hz.

NHG 3000 L

Emptying silo vehicles

NHG 900 L

Applications

Series NHG L hydraulic external vibrators are particularly suitable for emptying containers and bulk material hoppers containing adherent bulk materials, for preventing bridging and tubing and for compacting various materials.

A special characteristic is its use for unloading transport vehicles, e.g. trucks, silo buses and ships.

The vibrators are driven via the hydraulic system belonging to the carrier vehicle, and are therefore independent of any external energy supply.

Design and functioning principle

The rotary vibration is created by an unbalance. High rotational speeds result in large centrifugal forces.

The rotational speed, and hence the centrifugal force, can be regulated continuously via the volume flow rate.

NHG 500 L, NHG 900 L and NHG 3000 L and NHG 6000 L have fixed working moments.

The unbalance of the NHG600 RL can be adjusted in steps, from the outside.

Series NHG L hydraulic external vibrators are also available without an overflow oil line connection. The pressure in the return line must not exceed 2 bar.

Permissible operating conditions:

Drive Medium:

Clean, filtered hydraulic oil DIN 51524/25 or engine oil DIN 51511

Operating pressure:

Pressure side 200 bar max.
Overflow oil line back pressure 2 bar max.

Ambient temperature:

-20°C to 80°C NHG 500 L to NHG 900 L
-20°C to 60°C NHG 3000 L
-20°C to 40°C NHG 6000 L

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Netter Hydraulic External Vibrators Series CC, CV, CCV and DV

- Driven by flanged hydraulic motor
- Nominal frequency from 1.750 min^{-1} to 5.400 min^{-1}
- Centrifugal force from 7.320 N to 49.210 N
- Frequency continuously adjustable by hydraulic pressure
- High working moment, high amplitude
- Low unit weight combined with high capacity
- Mounting by attachment screw (CCV), bracket (CC) or flange (CV/DV)

CV 2.8

CC 2.8

Application

Netter hydraulic external vibrators series CV, CC, CCV and DV are especially suitable to unload rail wagons and bulk hoppers as well as for the sieving and compacting of different materials.

Trucks and tractors which use hydraulic energy for dumping and lifting, are sources of hydraulic power.

A special feature of CC/CCV vibrators is the quick manual repositioning.

Design and functioning principle

The vibration (circular) is produced by unbalance pairs with double bearings.

The frequency and thus the centrifugal force are continuously adjustable by the volume flow. The hydraulic external vibrators generate high amplitudes with low frequencies.

The working moment of series CC, CV, CCV and DV 2.8/4 is adjustable in 6 steps. The working moment of series DV 6-12,

-25 and -50 is continuously adjustable. The only difference between the units is the execution of the housings. The vibrators generate very high forces in proportion to their weight.

Permissible operating conditions

Drive medium:

Hydraulic oil (clean and filtered)
DIN 51524/25 or motor oil DIN 51511

Operating pressure:

Max. 80 bar inlet,
max. 2 bar outlet.

Ambient temperature:

- 20°C to 60°C

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consult our experienced application technicians.

Leibis Lichte Damm (Germany)	2 x 3	NVI – 3	CAT 307
Marsyangdi Hydro-Electric Project (Nepal)	1 x 3	NVI – 3	CAT 307
Tsankov Kamak Dam (Bulgaria)	1 x 4	NVI – 4	Liebherr R 308

Applications

Netter hydraulic internal vibrators series NHR 150 are particularly suitable for the compaction of concrete of biggest granularity (up to 250 mm grain diameter).

Design and function

The vibrators are suspended on a mounting beam by cardans. Various designs of mounting beams are available, also variable ones (see diagram). Hydraulic excavators, loaders and dozers come into question for use as carrier vehicles. For example, the existing bucket of a hydraulic excavator can be removed and replaced by a Netter mass concrete compaction unit series NVI.

The complete controls for the NHR 150 vibrators are integrated in the mounting beam.

The existing supplementary hammer-/scissors operation equipment can generally be used for hydraulic supply and operation. Thus no further modifications to the carrier vehicle are required.

NetterVibration offers the accessories required for mounting, installation, control and monitoring of vibrators.

Netter provides solutions. Consult our experienced application technicians.

Application

The vacuum fixing devices VAC are designed to allow quick attachment of vibrators to smooth or, under circumstances, uneven and curved surfaces. A special feature of the vacuum fixing is the ease of attachment, which requires no welding or bolting.

Construction and working principle

The appropriate vibrator is screwed to the vacuum fixing and connected to the supply hose leading to the hand valve.

As soon as the vacuum fixing is connected to the compressed air supply, the unit is sucked tightly to the mounting surface, thus ensuring a strong connection between the vibrator and the surface.

The air economizer "S" creates a reduced vacuum, which is sufficient to clamp the vibrator when it is not running and which reduces the air consumption by over 30%.

ATEX conform vacuum fixings series VAC and units with stainless steel plate are available.

When the vibrator starts, the fixing device automatically produces the full vacuum.

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (Filter ≤ 5 µm)

Operating pressure:

2 bar to 6 bar

Ambient temperature:

-10°C to 60°C

NetterVibration offers the accessories required for mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consults our experienced application technicians.

Netter Pneumatic Turbine Vibrators Series NCT

- Rotary vibration
- Resistant to aggressive environmental conditions
- Unrestricted, lubrication-free operation
- Nominal frequency from 4.900 min^{-1} to 45.460 min^{-1}
- Centrifugal force from 288 N to 8.659 N
- Frequency continuously adjustable by means of air pressure
- Reduced noise level
- Maintenance-free due to continuously lubricated rolling bearing
- Available in ATEX conform or in stainless steel versions

* dimensions for mounting horizontal, bore ØE

Sifting of fine grained products

Applications

Series NCT pneumatic turbine vibrators are particularly suitable for moving bulk materials. They can be used for emptying bunkers, driving chutes, sieves and vibrating tables and for the mechanical stimulation of processes.

Special features of the NCT vibrators are high frequency at low noise level and low air consumption.

Design and functioning principle

The rotary vibration is produced by an eccentrically mounted turbine with integrated unbalance masses. The frequency and therefore the centrifugal force can be continuously regulated via the operating pressure.

A directional control valve is necessary for operation (not supplied).

ATEX conform series NCT turbine vibrators and units with stainless steel housings are available.

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (filter ≤ 5µm), unrestricted, lubrication-free operation

Operating pressure:

2 bar to 6 bar

Ambient temperature:

-20°C to 120°C

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consult our experienced application technicians.

Dusting off filter wires

Emptying silo trailers

Applications

Pneumatic roller vibrators series NCR are particularly suitable for the elimination or reduction of friction.

They can be used for emptying bunkers and preventing adhesion to pipes and plates. Special features of the NCR vibrators are very high frequencies, high centrifugal forces and insusceptible resonance behaviour.

Construction and working principle

The rotary vibration is created by the high centrifugal force of a circulating steel roller, which runs on a steel ring at very high frequency.

The frequency, and hence the centrifugal force, can be continuously regulated via the operating pressure.

Series NCR roller vibrators can be operated using lubrication-free compressed air.

A multi-directional valve is required for operation (not supplied).

Permissible Operating Conditions

Drive medium:

Compressed air or nitrogen (filter ≤ 5µm) preferably with oil mist

Operating pressure:

2 bar to 6 bar

Ambient temperature:

-20°C to 120°C

HT version for temperatures up to 200°C

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consult our experienced application technicians.

Sorting and aligning

Emptying without bridging

Applications

Series NCB pneumatic ball vibrators can be used wherever bulk materials need to be moved.

They serve in the emptying of bunkers, for preventing bridging, rat-holing and adhesion. When used to drive chutes, sieves and vibrating tables, they ensure that the material flow is maintained.

The special feature is the simple construction.

Construction and Working Principle

The rotary vibration is created by the high centrifugal force produced by a circulating steel ball, which runs on hardened, polished steel races.

The frequency, and hence the centrifugal force, can be continuously regulated via the operating pressure.

Series NCB ball vibrators can be operated using lubrication-free compressed air.

A multi-directional valve is required for operation (not included in the scope of supply).

Permissible Operating Conditions

Drive medium:

Compressed air or nitrogen (filter ≤ 5 µm), preferably with oil mist

Operating pressure:

2 bar to 6 bar

Ambient temperature:

-20°C to +120°C
HT version up to +200°C

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consult our experienced application technicians.

NetterVibration

Netter Pneumatic Linear Vibrators Series NTS

Filling of powder products

Maintaining material flow

Vibrating and compacting of various material in cartons

Discharging aid on the container

Conveying with Netter **PowerPack**

Compaction of form sand in foundry forms

Compaction of powder in sacks

Applications

The pneumatic linear vibrators series NTS are especially suitable for conveying, compacting and loosening bulk material, due to the completely linear vibration.

They are used to empty bins and as drives for conveyor and dosing troughs. A special feature of NTS vibrators is the possibility of the synchronous operation of several NTS when using a coupling kit. Starting from NTS 350 NF to NTS 50/08 this is available as special execution and starting from NTS 50/10 to NTS 20/40 it is standard.

Design and functioning principle

The vibration (sinus-shaped oscillation) is produced by a freely vibrating, self reversing piston. This oscillation supports, expedites or enables a variety of applications. NTS linear vibrators start and stop without delay in any installed position.

A built-in pressure spring provides a reliable start-up of vibrators with aluminium housing up to NTS 50/04 and NTS 50/08. The amplitude is set by means of the optional throttle valve.

An increase of the supply pressure causes a higher frequency. For operation a control valve is required (not included in scope of delivery). ATEX compliant linear vibrators of the NTS series and units with a stainless steel housing are available.

Permissible operating conditions

Drive medium:

Compressed air or nitrogen (Filter $\leq 5 \mu\text{m}$), preferably with oil mist

Operating pressure:

2 bar to 6 bar

Ambient temperature:

-10°C to 60°C

Aluminium housing 5°C to 60°C

NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.

Netter provides solutions.

Consults our experienced application technicians.
